

Equity Auction - Official Rulebook

Equity Auction is a completely online, high-stakes trading simulation event hosted on a dedicated FinTech Club cloud server and domain. Teams will act as investors navigating market uncertainty, strategic negotiations, and dynamic shocks.

1. General Guidelines & Platform Rules

- Team Size: 1-4 members.
- Platform: The entire event will be conducted online via the official Equity Auction web domain.
- Communication: All official announcements and market updates will occur within the designated portal.
- Code of Conduct: Any exploitation of platform bugs, unauthorized API calls, or abuse of the server infrastructure will result in an immediate, unappealable ban.

2. Event Progression & Mechanics

- Round 0 (Prelim - Market Pulse): A timed online finance quiz and case study.
- Round 1 (Blind Bid - The Rumour Mill): Teams receive a virtual starting balance. Portfolios are auctioned blindly based on cryptic hints released by the organizers.
- Round 2 (Reveal & Trade - The Barter Window): Portfolios are revealed. Teams engage in pure barter. All trades must be processed through the server's digital ledger.
- Round 3 (The Payoff - The Final News): Breaking news will be broadcasted. Asset values will update dynamically on the server. Highest final net worth wins.

3. System Outage & Failover Protocol

- Participant Latency: Teams are solely responsible for their internet connection. Network drops on the participant's end will not warrant time extensions or trade reversals.
- Server Failover: In the event of a catastrophic server crash or backend failure during active trading, all market activity is immediately frozen. A timestamped snapshot of the ledger will be used to restore balances.
- Manual Fallback: If the cloud server cannot be restored within 15 minutes, the organizing committee will initiate a manual ledger fallback protocol via the emergency communication channel.
