

CRACK THE CRUDE

Spot it. Build It. Own It.

OFFICIAL RULE BOOK

1. ABOUT THE EVENT

Crack the Crude is a two-round competition designed to test knowledge around the oil and gas industry, quick thinking, visual recognition, technical understanding, creativity and teamwork.

The competition consists of:

Round 1 – The Floor: A fast-paced image identification challenge.

Round 2 – Build the Reservoir: A hands-on challenge involving reservoir construction and fluid-flow demonstration.

2. ROUND 1 – THE FLOOR

The Floor is a head-to-head image identification challenge where participants identify industry-related images while managing their individual timers.

Eligible participants

Participation type Solo (individual participation only)

Format:

- Two participants compete head-to-head with an individual countdown timer.
- Images are displayed one at a time; participants may make multiple guesses while their timer runs.
- A participant may pass an image to the opponent, subject to a time deduction.
- Correct identification moves the game forward, with turns alternating as per the event flow.
- The participant whose timer reaches 0:00 first is eliminated; the opponent advances.

Image Categories:

Drilling Rigs

Geological Formations

Wellhead & Christmas Tree Equipment Rock & Core Samples

Company Logos

Production & Refining Equipment

Exploration & Well Logging

Petroleum Products

HSE & Safety Symbols

3. ROUND 2 – BUILD THE RESERVOIR

A hands-on challenge where teams construct a simplified subsurface model and demonstrate fundamental reservoir and petroleum-system concepts through fluid movement.

Team Size 3-4 members

Format:

- Round 1 qualifier advance to Round 2 and form teams.
- Teams construct their model using the materials provided.
- Each model must incorporate a reservoir rock, seal rock and hydrocarbon trap.
- Teams demonstrate fluid storage, identify Oil and water zone, Amount of fluid stored, reservoir geometry and properties of rock.
- Teams explain their model and answer basic technical questions from the judging panel.

4. EVALUATION – ROUND 2:

Evaluation Parameter	Marks
Reservoir Construction & Geometry	15
Seal Quality & Effectiveness	15
Trap Design & Hydrocarbon Accumulation	15
Porosity & Fluid Storage	10
Permeability & Fluid Flow Behaviour	10
Fluid Migration & Saturation Understanding	15
Technical Explanation	10
Creativity & Presentation	10
TOTAL	100
