

DevDash '26: Build. Break. Laugh.

Conducted by: Web Development Division, Cyber Labs

Duration: 6 hours

Format: Team Contest

Team size: 3-4 participants

Flow of the Event

1. Registration – **Teams of 3–4 participants** register before the event through **Unstop**. The participating teams are finalized before the event begins.
2. **Opening Ceremony** – The organizing team introduces the event, explains the schedule, rules, judging process and important instructions. Participants can clarify doubts before the challenge begins.
3. **Mystery Prompt Reveal** – Each team receives a random challenge prompt. **The surprise element** encourages participants to think quickly, interpret the idea creatively and develop an original solution.

The challenge prompt pool may include:

- **The World's Worst E-Commerce Website** – Design the most hilariously terrible online shopping experience imaginable while keeping it functional enough for users to explore.
 - **Chaos Click** – Create a website that becomes progressively more chaotic every time the user clicks or interacts with it.
 - **AI Roast Generator** – Build a website that asks users a few fun questions and generates a humorous, light-hearted roast.
 - **College Website Designed by Pirates** – Reimagine the official college website as if it were built and managed entirely by pirates.
4. **Development Phase** – Teams work together on their assigned challenge within the allotted event duration. **The focus is on creativity, execution** and turning the given idea into a functional and presentable website.
 5. **Submission** – At the end of the development period, teams submit their completed project along with the required presentation and a brief explanation of their work.
 6. **Presentation Round** – Each team gets **3–5 minutes** to demonstrate its project to the judges, followed by a short **question-and-answer round**.
 7. **Judging** – Projects are evaluated on the quality of the final product, interpretation of the prompt, presentation and the overall approach taken by the team.
 8. **Result & Prize Distribution** – After evaluation, the winners are announced and prizes are distributed, followed by the closing of the event.

Importance of the Event

DevDash '26 offers an accessible entry point into web development and hackathon culture. The mystery-prompt format encourages participants to think creatively under time constraints while turning an unexpected idea into a working product. The event emphasizes practical execution, teamwork, rapid problem-solving and the ability to explain and present a finished project.

By keeping the challenge approachable and allowing participants to use AI assistance while requiring them to understand the work they present, the event provides beginners with a low-pressure introduction to technical competition while still leaving room for originality and strong implementation.

Rules

- Participants must work on their project during the event.
- Each team must submit its own work within the announced submission time.
- Teams must be able to explain their project and the ideas behind it during judging.
- Participants may use AI assistance during development, but they should understand the work they present.
- Any unfair practice, misrepresentation of work or violation of the event rules may result in disqualification.
- The decision of the judging panel will be final.

Deliverables

- Completed project.
- Runnable website.
- 3–5 minute presentation/demo.
- Brief explanation of the project and development approach.

Evaluation & Marking

The evaluation will be based on four equally weighted areas, with each carrying 25 marks:

- **Product — 25 marks:** Overall quality, creativity, usability and completeness of the final project.
- **Prompt Interpretation — 25 marks:** How creatively and effectively the team understands and transforms the given prompt into a project.
- **Presentation — 25 marks:** Clarity of explanation, quality of demonstration and ability to answer the judges' questions.
- **Process — 25 marks:** Problem-solving approach, teamwork, use of available time and understanding of the submitted work.

This evaluation structure is intended to keep judging simple, transparent and consistent across all participating teams.
